

DEKO MV Glass

A 99.9 % Glazed Panel Wall

Glazed Panel Walls With Optional Stacking Arrangements

Like our solid panel walls DEKO MV, DEKO MV Glass is particularly suited to dividing up large spaces into smaller units and with specific requirements for stacking and installation.

Fully glazed panel walls with their flexible structure and their transparent look with a single layer of glass, are the perfect choice for, for example, canteens, offices and shops.

Panel walls can be integrated into existing walls or built together with DEKO FG fully glazed partitions, to bring the whole unit into a harmonious concept.

Unique in its very own way

The DEKO MV Glass has been specifically tailored for individual interior decoration and can be supplied largely in all heights and widths.

The fully glazed panels are supplied as standard with 10 mm or 12 mm toughened clear safety glass. These are fitted with slim natural anodised aluminium tracks at the top and bottom of each pane.

As standard the last glazed element against a fixed wall functions as a pass door and is fitted with a floor lock. Options for door handles include a recessed handle, a knob, a bracket handle or a ball catch.

As the panel wall is tailored to each interior design, it can be fitted, for example, to fit in with the building's modules or follow a 90 degree corner without having to be divided up into several separate panel sections.

The flexible structure of the panel wall allows the whole wall or just parts of the wall to be closed, depending on the desired functionality.

Suspension, locking and stacking

DEKO MV Glass requires to be supported structurally from above by an aluminium track.

The top-hung tracks of the fully glazed panel wall are produced individually for each contract, giving a wide range of stacking options.

The running track in the ceiling structure and the aluminium rails on the glazed elements can be powder coated in a wide variety of colours.

As each glazed panel is handled and locked individually, there are countless stacking options to cause least possible inconvenience both to the eye and with regard to space.

In areas with high sound and fire requirements, we recommend our solid DEKO FV folding partitions and DEKO MV panel walls.

Both DEKO FV and DEKO MV can be supplied with built-in glazed modules.

Decoration

Like our other DEKO glazed partitions, DEKO MV Glass is suitable for applied film in such designs as stripes, patterns or texts in various colours or frosted versions.

One or more glazed elements in the panel wall can be supplied with coloured or frosted glass for both privacy and options to use the surface as whiteboard.
